

About Me

Ricardo Brites - 24

Generalist Unreal Engine Developer with 3+ years of professional experience and a published AAA Web3 game. Proficient in Gameplay Ability System, Gameplay Tags, multiplayer replication, and UI development. Experienced with Perforce and Atlassian tools. Fast learner focused on building maintainable, performant game systems.

Experience

Fracture Labs - Game Engineer

2022-

Remote

2025

- Implemented the player survival stat system (Water, Food, Blood, Health) with fully replicated logic and synchronized UI.
- Expanded the weapon system with new gameplay stats, UI-exposed data, interaction logic, and a modular sound-implementation pipeline supporting gunplay features and designer iteration.
- Built internal systems enabling the sound designer to integrate menu and UI SFX efficiently, accelerating iteration workflows.
- Optimized the vehicle and engine audio pipeline, eliminating idle-instance overflow and improving performance and clarity by ~850% through dynamic instance management.
- Created the complete circular gauge vehicle dashboard UI (Speed, Fuel, Nitro) using custom materials.
- Overhauled the entire input system, consolidating actions and integrating them into a scalable settings framework with clean rebinding support.
- Conducted technical research and produced internal documentation for the redesigned input system, improving onboarding and cross-team understanding.
- Designed and implemented the in-game map UI with dynamic player markers, objective indicators, and real-time updates driven by replicated game data.
- Developed PlayFab cloud scripts to reset and manage player stats across all accounts, improving debugging, QA workflows, and live-ops maintenance.
- Implemented features inside standalone Unreal Engine plugins, managing build.cs dependencies, avoiding forbidden references, and maintaining clean module separation.

Arxi - Web Development Intern

2019-

Leiria - Portugal

2019

Designed and developed a fully functional web store using Django.

Education

Polytechnic Institute of Leiria School of Technology and Management - Bachelor's Degree in Game Development

2020-2024

Leiria - Portugal

Practice-focused degree covering game programming, computer graphics, game design, and AI with industry tools such as Unreal Engine, Unity, and C++

Domingos Sequeira High School - Computer Systems Management and Programming

2016-2019

Leiria - Portugal

Technical secondary education focused on software development, system administration, and database management. Covered programming fundamentals (C, VB, SQL), network configuration, operating systems, and IT project workflows.

Communication

Portuguese - Native

English - Fluent
CEFR C2

Skills

Unreal Engine	C++	C#	.NET
OpenGL	Python	SQL	Unity
Jira	Confluence	Figma	Git
Github	Perforce	HTML	CSS
Javascript	Typescript	React	Node.JS
Linux Terminal	Windows	Visual Studio	Visual Studio Code

Relocation & Work Authorization

Canada (Visa Needed)

Eligible for IEC Young Professionals and Working Holiday programs (no LMIA required).

United States of America (Visa Needed)
